READY-MAN® DF

Recommended for use on soybeans, cotton, and other high manganese use crops.

GENERAL INFORMATION

READY-MAN® DF is specifically formulated, containing chelated manganese designed to achieve compatibility with Glyphosate and other herbicides commonly tank mixed with Ammonium Sulfate (AMS), water conditioners, or other fertilizer salts. A custom blend of compatibility and chelating agents preserves the efficacy of the herbicide while maintaining optimum availability of the manganese nutrient. Manganese is a micronutrient required by plants for carbohydrate and nitrogen metabolism, as well as for chlorophyll production and maturity. READY-MAN® DF is recommended for use on soybeans.

GUARANTEED ANALYSIS:

Derived from: Manganese Sulfate, Manganese Citrate, Manganese EDTA.

DIRECTIONS FOR USE

By applying a tank mix of READY-MAN® DF with Glyphosate and/or other post-applied herbicides, it supplies available Manganese. This will allow the user to furnish plant nutrients as well as weed control in one bundled application. Be sure to consult herbicide labels regarding use of AMS or other water conditioners. When mixing with herbicides, add ingredients in this order: 1) water, 2) AMS or water conditioner, 3) READY-MAN® DF, 4) Glyphosate or other herbicide. Proper timing, rate, and placement is important for desired results and highly dependent on stage of crop growth, soil fertility levels, and environmental conditions. Carefully follow the precautions, restrictions, recommendations use rates and application directions appearing on herbicide labels. Always make a small-scale test (jar test) to assure compatibility in your material.

RECOMMENDED RATES

Apply READY-MAN® DF at a rate of 0.6 to 1.2 lb/ac in 10 to 20 gallons of water per acre. For aerial application, apply READY-MAN® DF at a rate of 0.6 to 1.2 lb/ac in a minimum of 5 gallons of water per acre. Manganese does not translocate from old to new growth efficiently, so a second application may be required to achieve desired results.

CAUTION

This product may be corrosive to aluminum, mild steel, and/or brass if not diluted properly. Copper or any of its alloys (brass or bronze) should never be used in any chelate handling system. Store in fiberglass, polyethylene or stainless steel containers/tanks once dissolved, otherwise store in original container. Check with equipment manufacturer for compatibility of components prior to use with this product. Do not mix or contaminate with strong acid materials.

This product comes in 25 lbs (11.34 KG) bags

This bulletin provides some technical information and is not intended to give complete information for all applications.

Always read and follow label directions.

BENEFITS

- Concentrated dry manganese formulation
- Easy to use product
- Designed for compatibility with glyphosate and glufosinate herbicide products
