

READY-MAN® Liquid Manganese

For Foliar Application Only. For use with Glyphosate and Other Post-Applied Herbicides.

0-0-0

GENERAL INFORMATION

READY-MAN® Liquid Manganese is a specifically formulated material designed to achieve compatibility with Glyphosate and other herbicides commonly tank mixed with Ammonium Sulfate (AMS), water conditioners, or other fertilizer salts. A custom blend of compatibility and chelating agents preserves the efficacy of the herbicide while maintaining optimum availability of the manganese nutrient. Manganese is a micronutrient required by plants for carbohydrate and nitrogen metabolism, as well as for chlorophyll production and maturity. READY-MAN® Liquid Manganese is recommended for use on soybeans, peanuts, cotton, and other high manganese use crops.

GUARANTEED ANALYSIS:

Sulfur (S).....**3.0%**
3.0% Combined Sulfur (S)
Manganese (Mn).....**5.0%**
5.0% Chelated Manganese (Mn)

Derived from: Manganese Sulfate, Manganese Citrate, Manganese EDTA

READY-MAN® Compatible with Herbicides

Liquid Manganese Chelate (3% S, 5% Mn) is formulated to be compatible with glyphosate containing herbicides. CoreAgri has taken sprayable Manganese to the next level with the READY-MAN® formulation. What does this mean for the farmer? With the demand for genetically modified seed increasing, growers are making less trips across the field for weed and pest control. READY-MAN® offers the grower the opportunity to add a micronutrient in the spray tank that is compatible with post applied herbicides.

DIRECTIONS FOR USE

By applying a tank mix of READY-MAN® Liquid Manganese with Glyphosate and/or other post-applied herbicides, this will allow the user to furnish plant nutrients as well as weed control in one bundled application. Be sure to consult herbicide labels regarding use of AMS or other water conditioners. When mixing with herbicides, add ingredients in this order:

- 1) water
- 2) AMS or water conditioner
- 3) READY-MAN® Liquid Manganese
- 4) Glyphosate or other herbicide.

Proper timing, rate, and placement is important for desired results and highly dependent on stage of crop growth, soil fertility levels, and environmental conditions. Carefully follow the precautions, restrictions, recommendations use rates and application directions appearing on herbicide labels. Always make a small-scale test (jar test) to assure compatibility in your material.

Package Sizes:

Bulk, 275 gallon mini-bulks, and 2 x 2.5 gallon package

THE ADVANTAGES

- Compatible with Round Up Ultra®, RoundUp Weathermax®, Liberty®, Touchdown®, and other nonselective herbicides in tank mixes with Ammonium Sulfate.
- Preserves efficacy of the herbicide while maintaining availability of Manganese.
- A proprietary blend of compatibility and chelating agents resulting in no clabbering, clogging, or settling out even through extreme rainouts and over long weekends.
- An efficient and economical source of manganese required for chlorophyll production. Manganese is also essential for carbohydrate and nitrogen metabolism.

RECOMMENDED RATES

Apply READY-MAN® Liquid Manganese at a rate of 1 to 2 qt/ac in 10 to 20 gallons of water per acre. Manganese does not translocate from old to new growth efficiently, so a second application may be required to achieve desired results.

This bulletin provides some technical information and is not intended to give complete information for all applications.
